

What is....

AI? PROGRAMMING? CODING?

Presented by Henry Kim

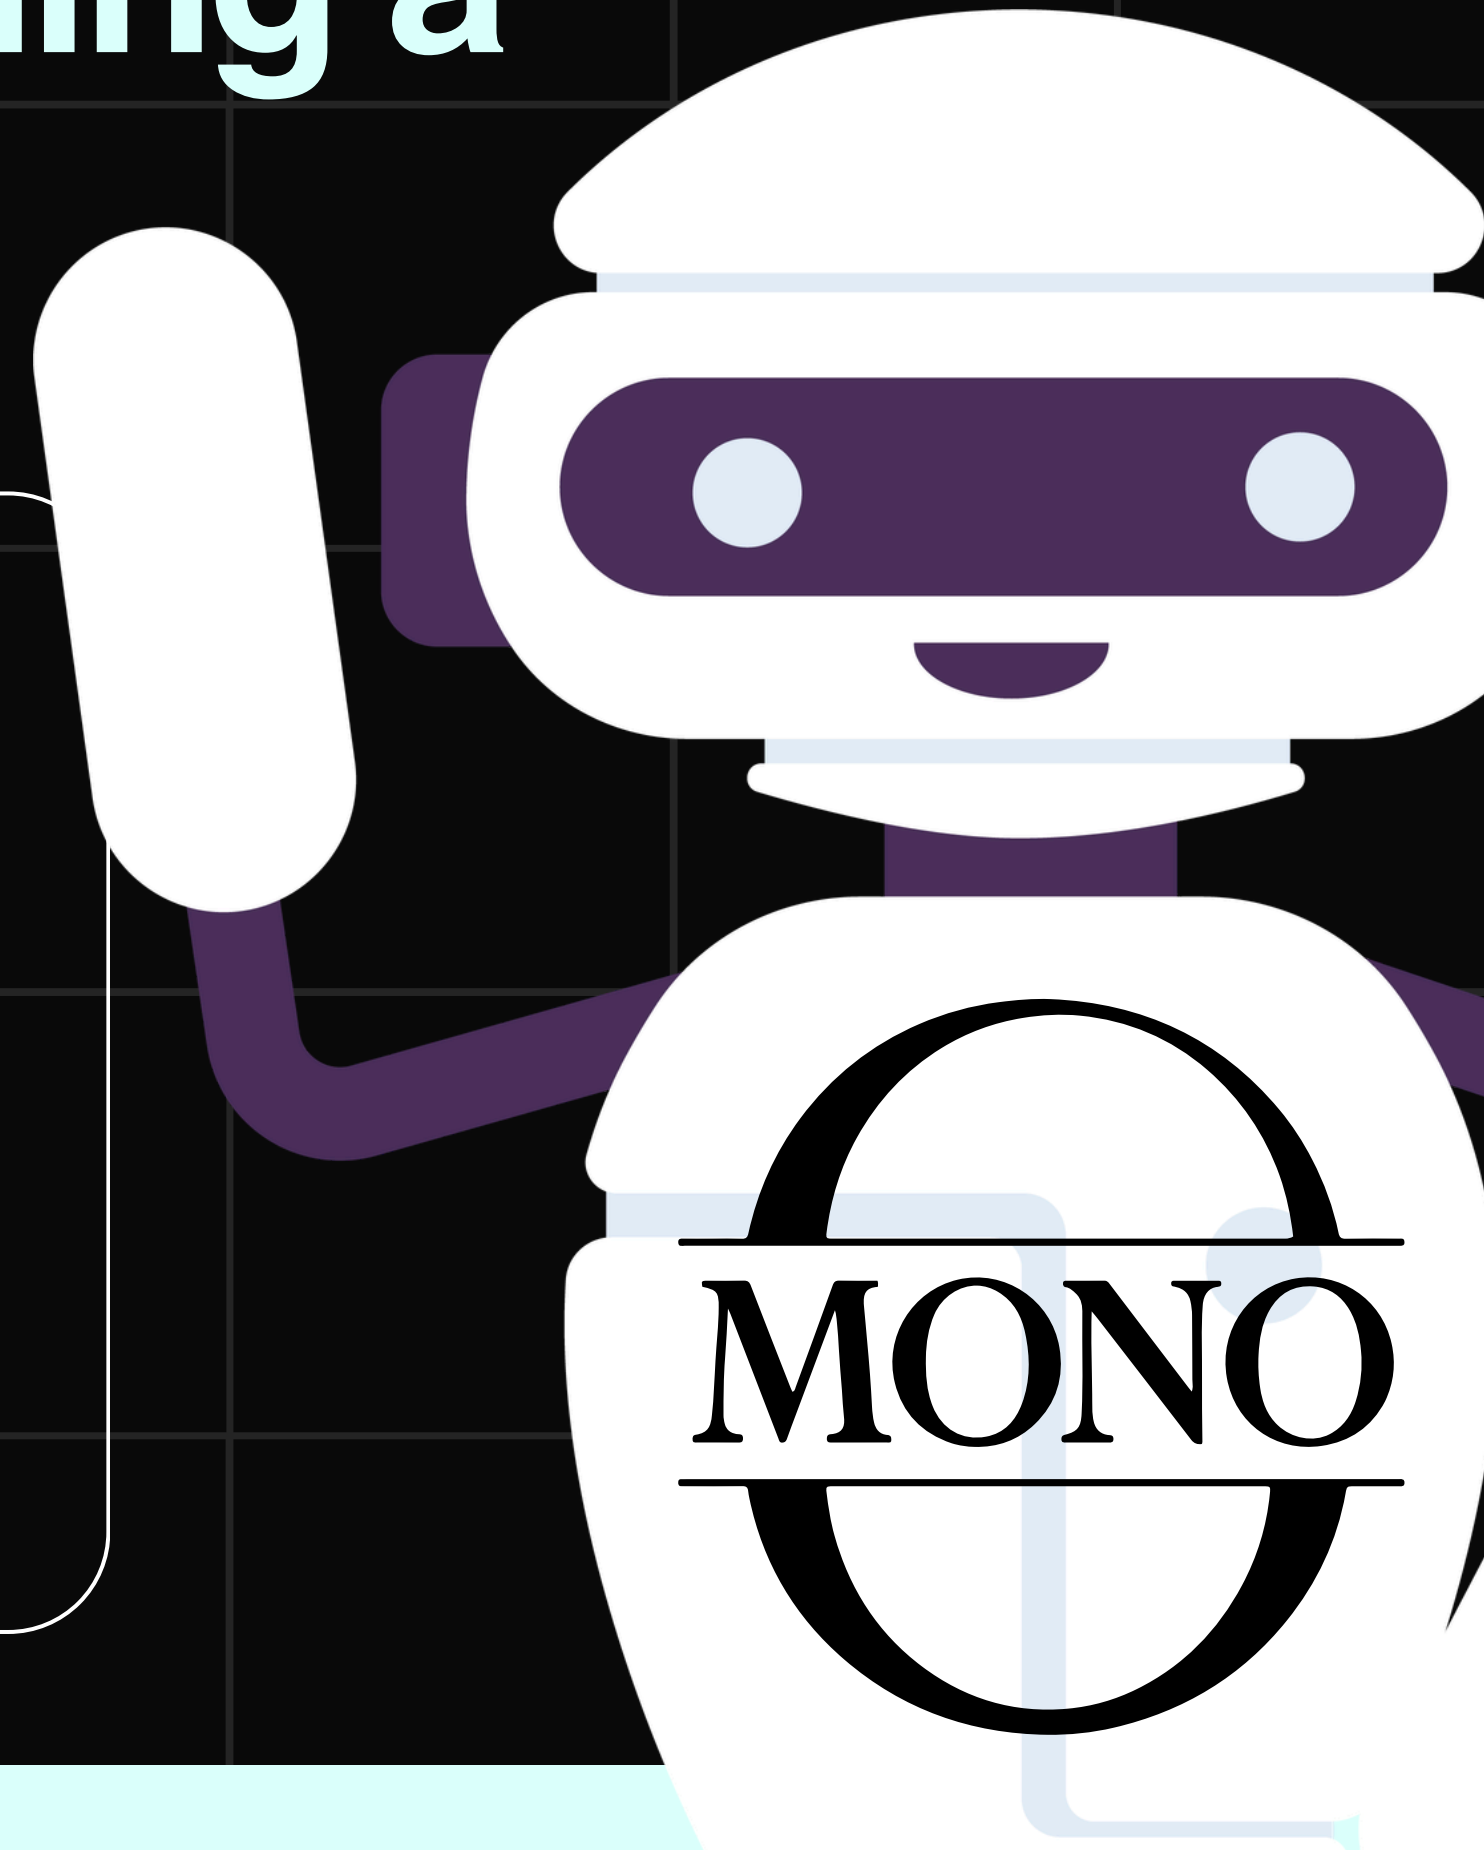

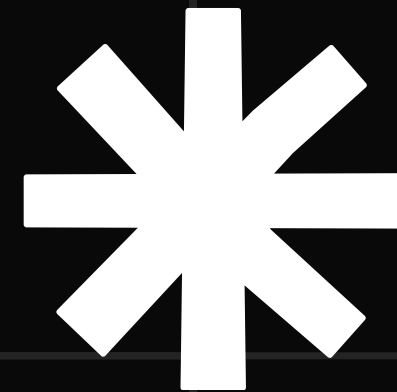

My Original Goal: Building a Start-up Called MONO

Inquiry Question:

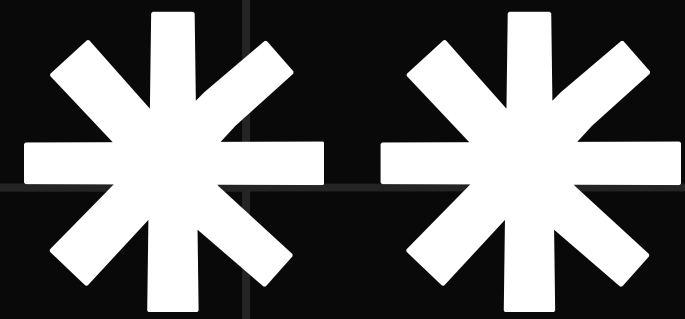

How can I build and manage a **start-up** that uses **automation** and **AI** to create a scalable, profit-driven platform for reselling and dropshipping?

Skills & Tools Needed

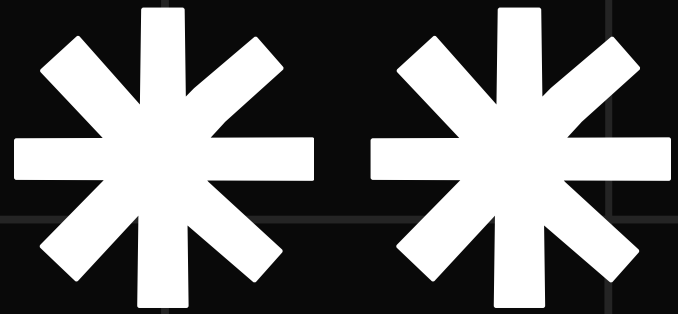

web development basics, programming languages (HTML, CSS, JavaScript, Python), API integration, database management, and AI fundamentals.

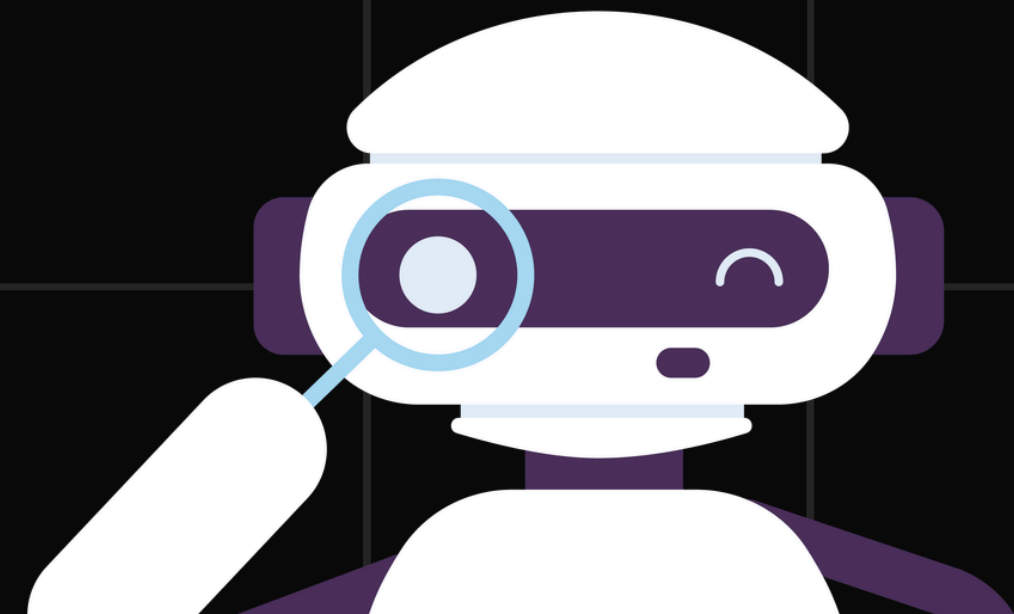

Why I Chose This Project

I have real experience in reselling limited items. It was time-consuming and hard to manage manually, so I wanted to build an AI system to make it easier and more profitable for everyone.

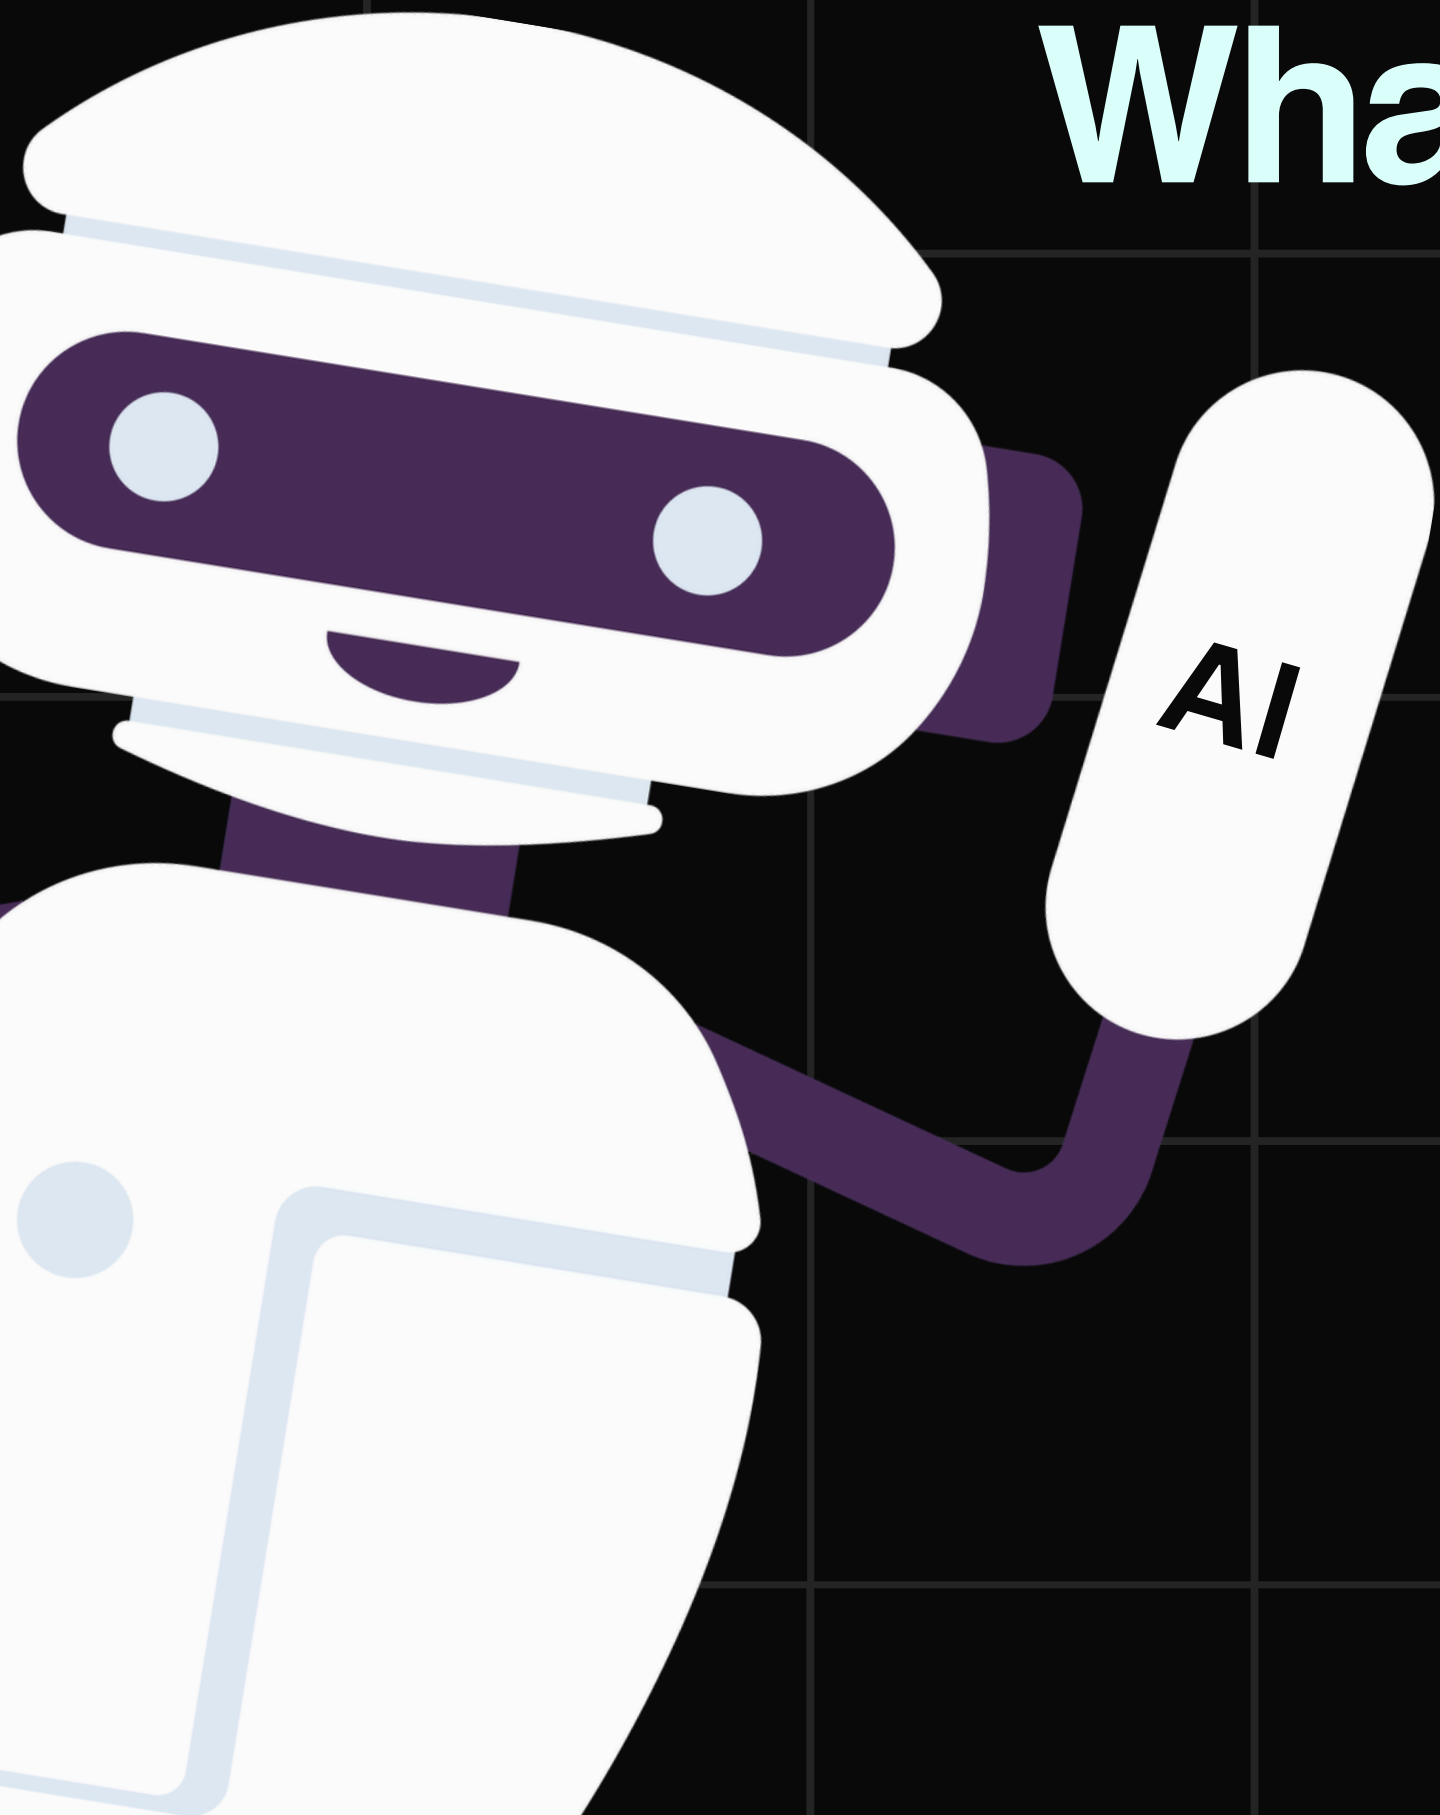

MONO?

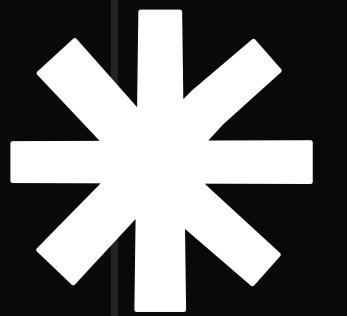

- MONO is an AI-powered smart commerce platform.
- It finds profitable resell & dropshipping products automatically.
- It calculates a Profit Score based on cost, fees, demand & competitors.
- Products with high scores are auto-listed on my store.
- It adjusts prices dynamically to stay competitive.
- Goal: One-click profit system for anyone.

What is AI & Why I Needed Programming Skills

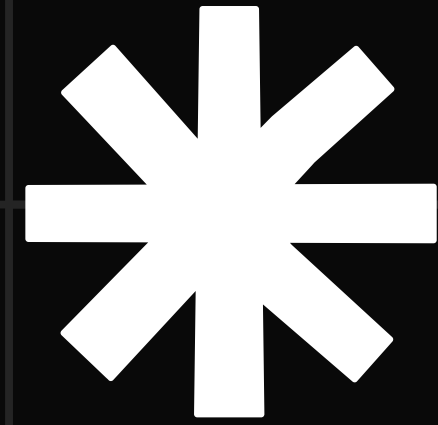

Artificial Intelligence (AI) refers to the development of computer systems capable of performing tasks that typically require human intelligence.

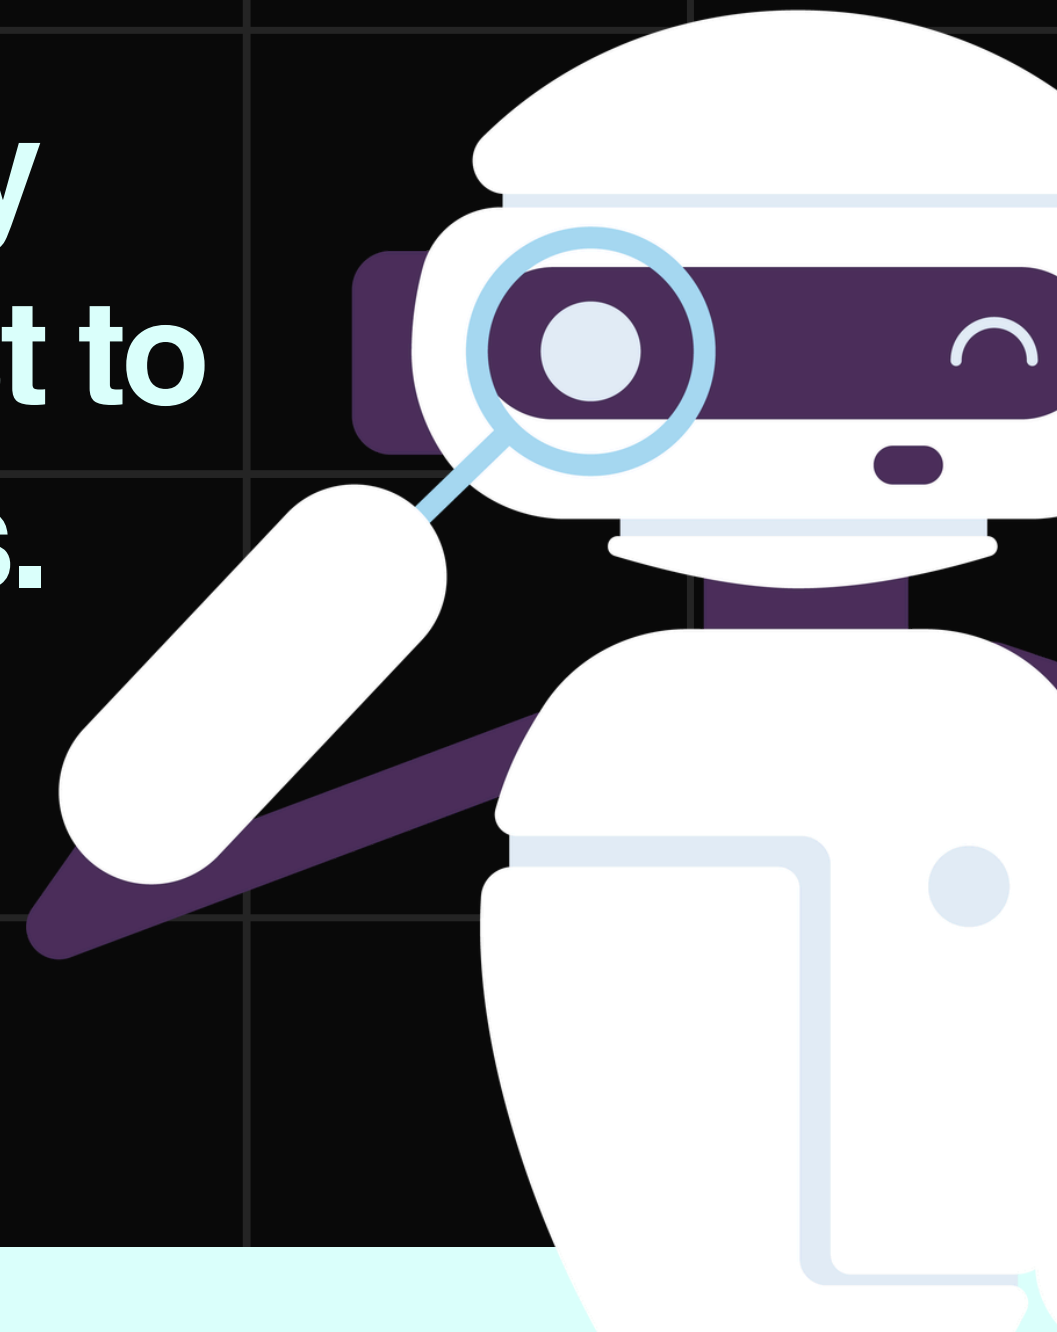

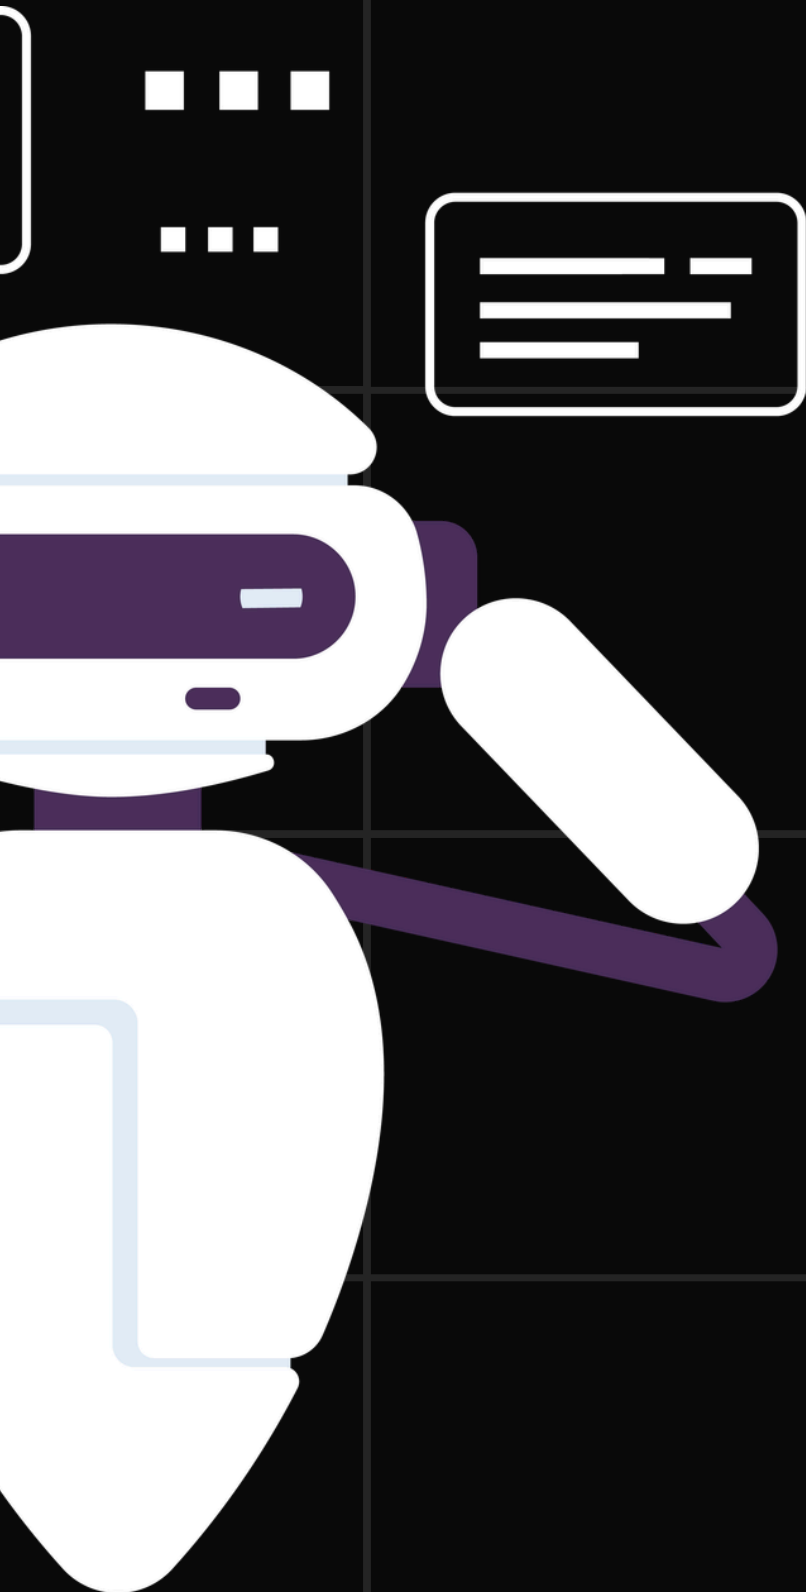

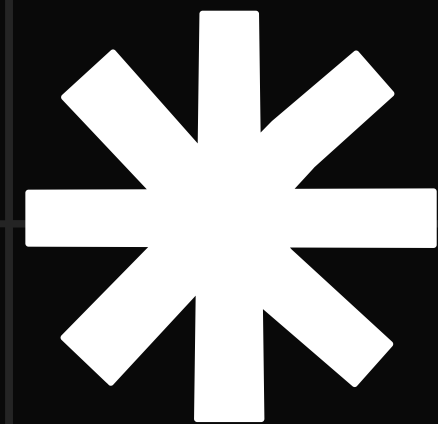

AI Models need Code

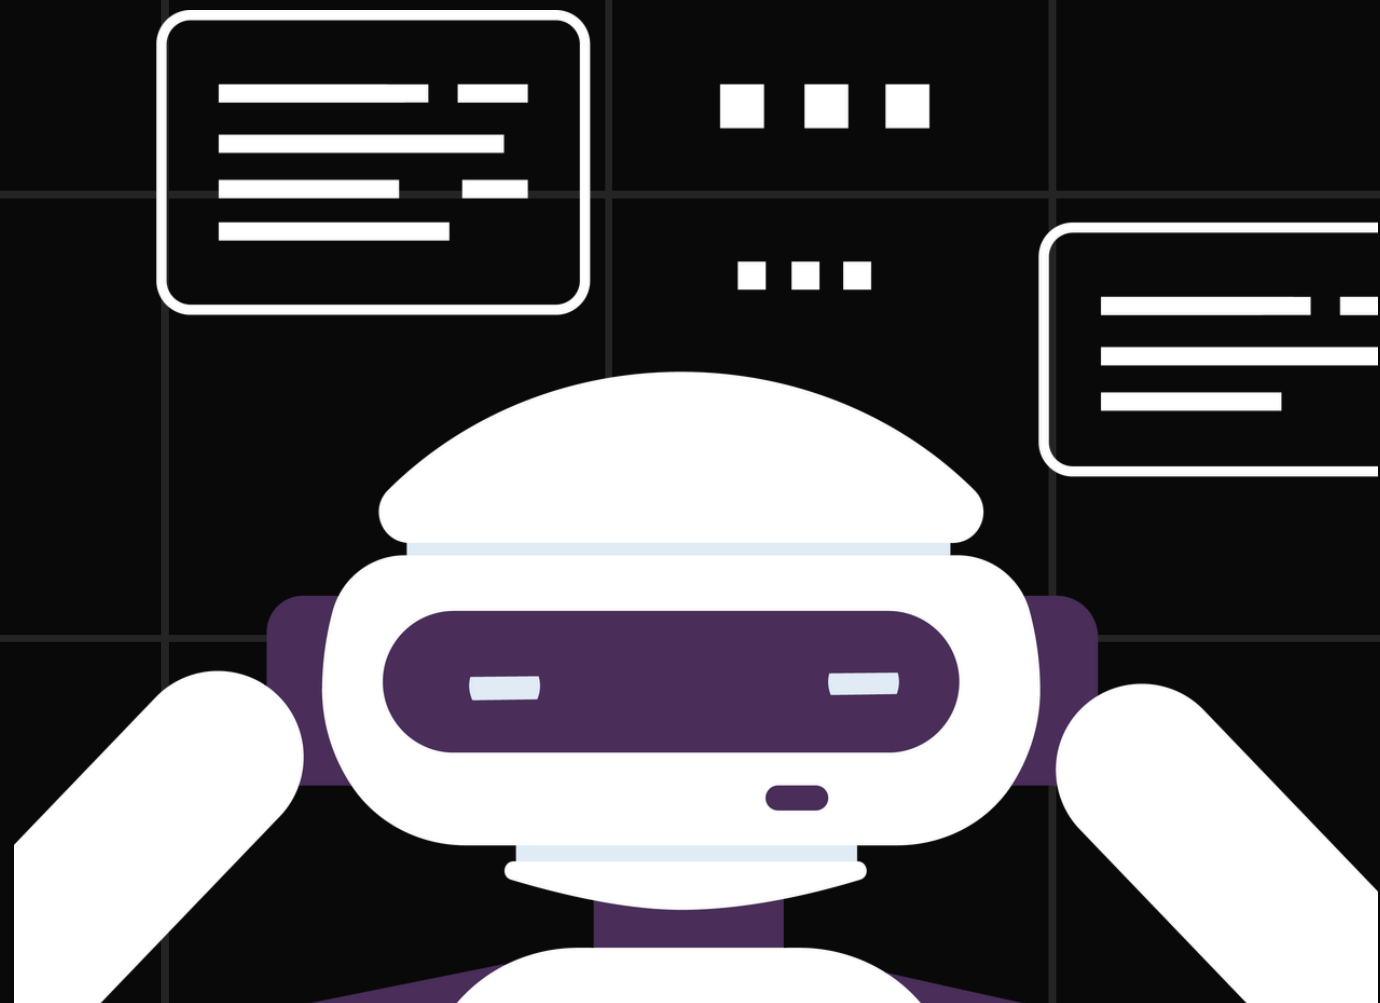

To build an AI system, you must write complex algorithms, train models, and handle data.

**No coding, No MONO —
so I pivoted: I'm building my
Personal Portfolio website first to
achieve programming skills.**

What I Needed to Build My Website

Domain & Hosting:

- Buy a personal domain (e.g., henrykim.ca)
- Connect domain to hosting platform (GitHub Pages, Vercel, Netlify)

Version Control:

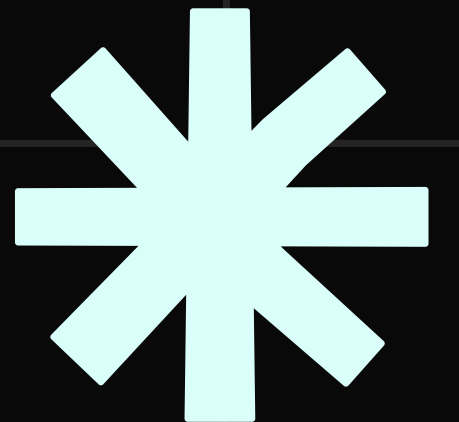

- Git & GitHub (manage code & publish website)

Core Languages:

- HTML: Page structure
- CSS: Styling & layout
- JavaScript: Interactivity & dynamic features

Other Tools:

- Text editor (VS Code, Sublime)
- Browser DevTools for debugging

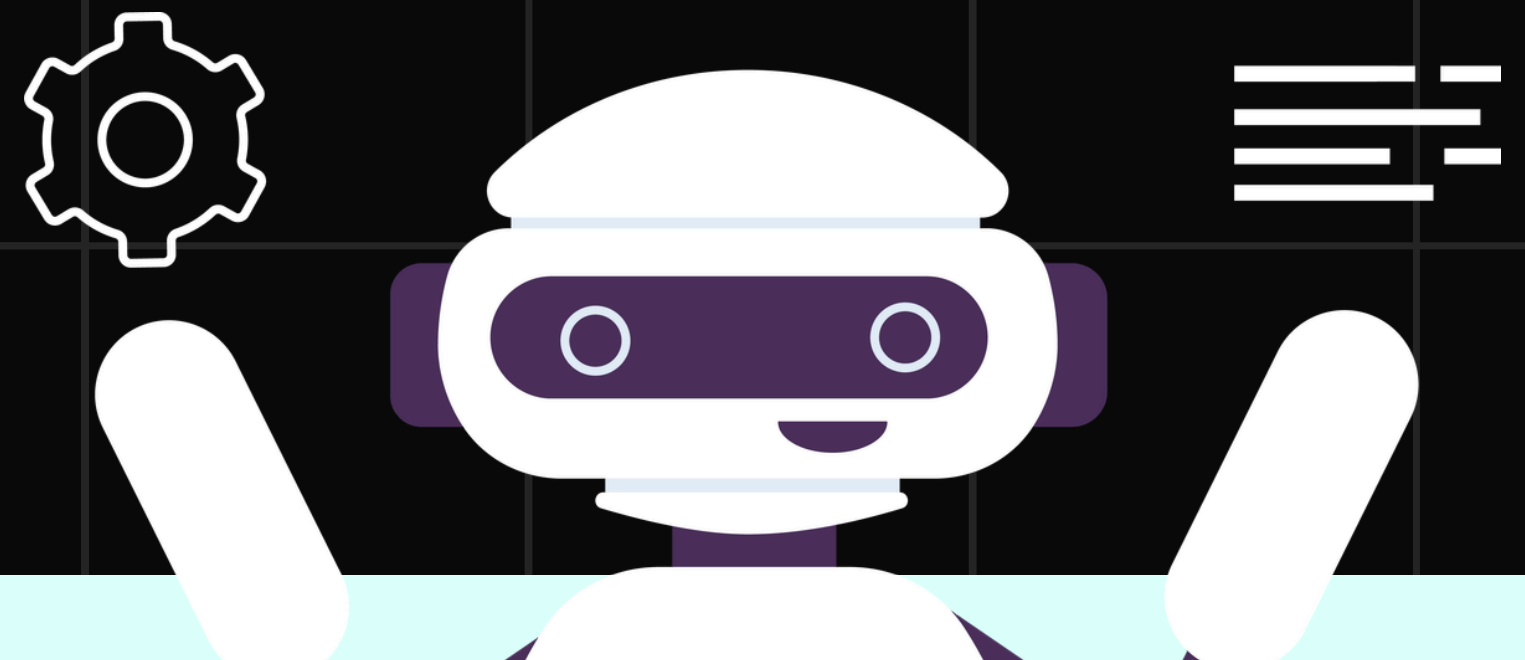

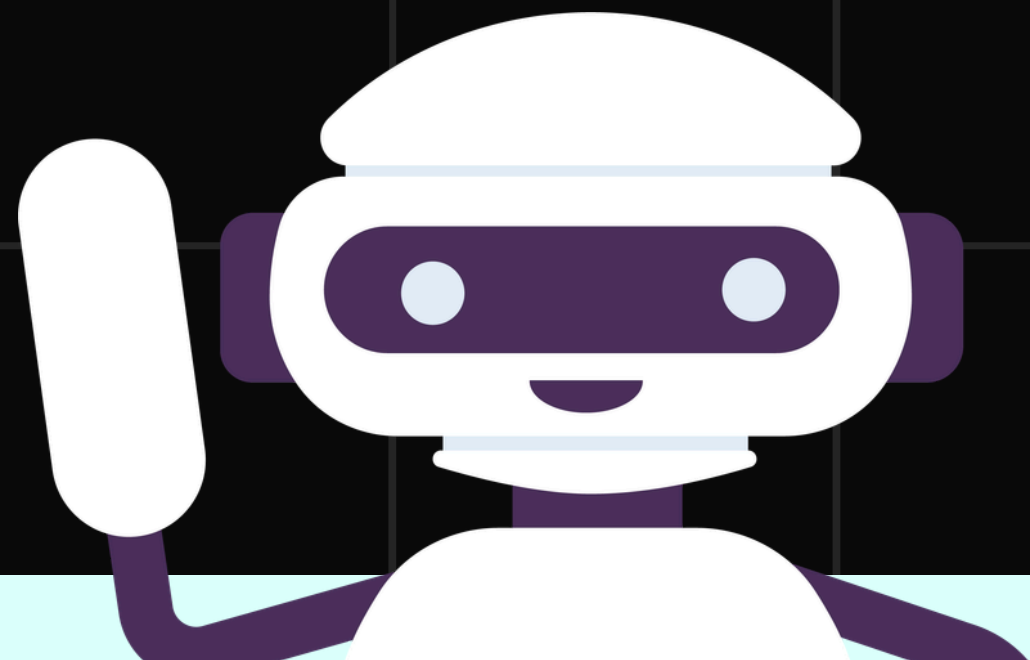

Step 1: Buying My Domain *

Finding & Buying

- I searched for a suitable domain for my personal portfolio on GoDaddy, a well-known domain provider.
- I found henrykim.ca available at a good price and purchased it.

Connecting & Hosting

- I learned how to use DNS settings to link my purchased domain to GitHub Pages, which offers free hosting.
- By setting up the correct DNS records, my website is now live at henrykim.ca.

Domain purchase receipt

It's official – as of **2025/05/21**, the .CA domain henrykim.ca is fully registered and active in the .CA Registry!

Questions? Concerns? Contact **your registrar**:

Your registrar: Go Daddy Domains Canada, Inc
Phone: +1.8669381119
Email: support@godaddy.com
Website: ca.godaddy.com

DNS Setting

	Type 	Name 	Data 	TTL 	Delete	Edit
☐	A	@	185.199.108.153	1/2 Hour		
☐	A	@	185.199.109.153	1/2 Hour

* Step 2: Starting to Code

Getting Started with Code

After buying my domain, I started coding my website from scratch — learning HTML, CSS, and JavaScript to build the structure, style, and interactivity.

Guidance from In-woo Park

I reached out to Inwoo Park, my senior with AI development experience. With his help and advice, I learned step-by-step coding basics and built my portfolio site more confidently.

34           <p>About</p>
35           <div class="bio">
36             <p1>17-years-old, born in S. Korea — incoming Engineering Science
37           </div>
38         </div>
39       </section>
40
41       <!--SECTION 3: CONTACT-->
42       <section class="contact-section">
43         <div class="text">
44           <div class="title">
45             <p>Contact</p>
46           </div>
47           <div class="email-div">
48             <p>Email</p>
49             <p1><a href="mailto:mail2yjkim@gmail.com">mail2yjkim@gmail.com</a>
50           </div>
51           <div class="instagram-div">
52             <p>Instagram</p>
53             <p1><a href="https://www.instagram.com/yxxjx_dsnv/" target="_blank
54           </div>
55           <div class="Github-div">
56             <p>Github</p>
```

What I did:

- Got comfortable with **VS Code** as my main code editor.
- Learned how to display basic information on a webpage using **HTML**.
- Applied CSS to make the layout cleaner and more organized.
- This version had no special features — just a plain white background and simple text.
- It was my first taste of real coding, which became the foundation for all later improvements.

```
17
18 <style>
19   .popup-content {
20     display: none;
21     opacity: 0;
22     transition: opacity 0.3s ease;
23   }
24
25   .popup-content.show {
26     display: block;
27     opacity: 1;
28   }
29
30   .section-title {
31     cursor: pointer;
32   }
33 </style>
34 </head>
35
```

```
175 <script>
176   function togglePopup(id) {
177     const element = document.getElementById(id);
178     element.classList.toggle("show");
179   }
180 </script>
181
```

What I did:

- Added a toggle feature: now each section stays collapsed by default and expands only when the title is clicked.
- This lets users focus on the parts they want to read.
- To implement this, I learned and used JavaScript for the first time.
- This step opened the door to making my website more interactive and dynamic.

Version 2.0

```
49 <!-- Sidebar (left navigation) -->
50 <nav class="sidebar">
51   Navigation</p><br>
53   <ul>
54     <li><a href="index.html" class="active">Home</a></li>
55     <li><a href="henry_essays.html">Essays</a></li>
56     <li><a href="henry_ec.html">Extra-Curricular</a></li><br>
57   </ul>
58
59   <p>Find me on</p><br>
60   <ul>
61     <li><a href="https://www.instagram.com/yxxjx_dsnv/">Instag
62     <li><a href="https://www.linkedin.com/in/henry-kim-85b5543"
63     <li><a href="https://github.com/yxxjx-dsnv">GitHub</a></li>
64     <li><a href="mailto:mail2yjkim@gmail.com">Email</a></li>
65   </ul>
66 </nav>
```

```
76 /*From here, Dark mode Css*/
77
78 body.dark-mode {
79   background-color: #121212;
80   color: #f1f1f1;
81 }
82
83 body.dark-mode a {
84   color: #c6c4c4;
85 }
86
87 body.dark-mode .sidebar {
88   background-color: #1e1e1e;
89 }
90 body.dark-mode .sidebar a.active {
91   font-weight: bold;
92   color: #dad9e2;
93 }
94
95 body.dark-mode .sidebar a:hover {
96   color: #e17acb;
97 }
```

What I did:

- Added a sidebar to improve navigation and visual convenience.
- The sidebar lets users click sections and jump directly to separate HTML files.
- Also added a dark mode as a hidden Easter egg: clicking the logo in the sidebar toggles it.

Version 2.5 (Final)

```
document.getElementById("korea-trigger").addEventListener("mouseover", function() {
  for (let i = 0; i < 250; i++) {
    const flag = document.createElement("div");
    flag.textContent = "KR";
    flag.style.position = "fixed";
    flag.style.left = Math.random() * 300 + "vw";
    flag.style.top = "-50px";
    flag.style.fontSize = Math.random() * 24 + 16 + "px";
    flag.style.zIndex = 9999;
    flag.style.pointerEvents = "none";
    flag.style.animation = `fall 4s ease-in ${Math.random() * 1000}ms`;
    document.body.appendChild(flag);

    setTimeout(() => {
      flag.remove();
    }, 10000);
  }
});
```

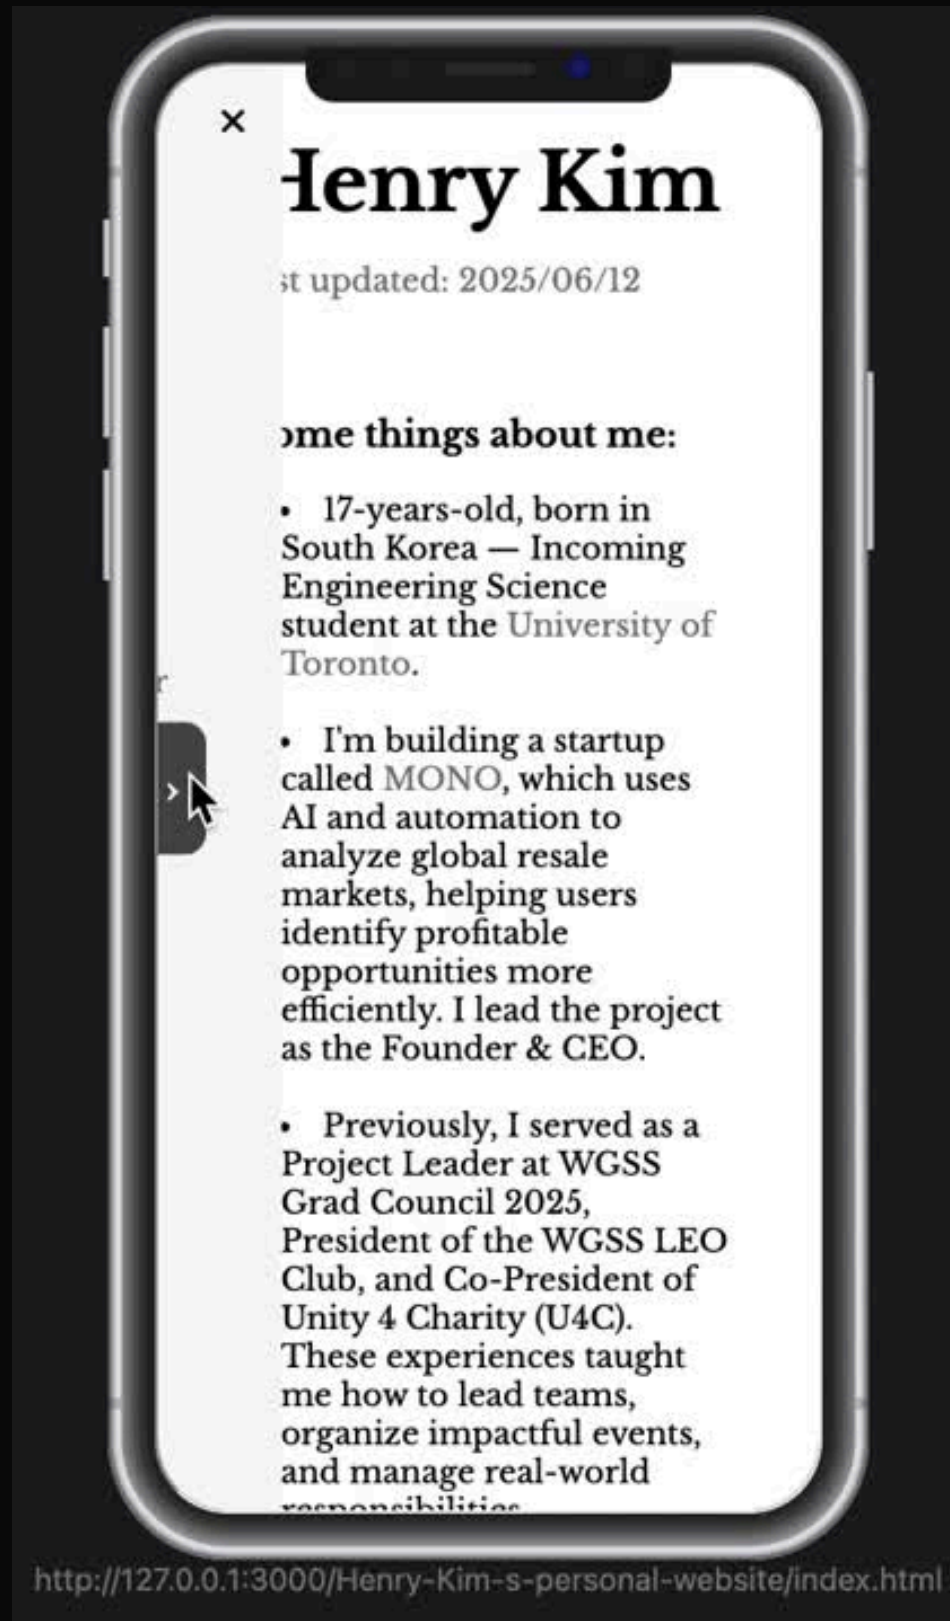

```
document.getElementById("korea-trigger").addEventListener("click", function() {
  for (let i = 0; i < 250; i++) {
    const flag = document.createElement("div");
    flag.textContent = "KR";
    flag.style.position = "fixed";
    flag.style.left = Math.random() * 300 + "vw";
    flag.style.top = "-50px";
    flag.style.fontSize = Math.random() * 24 + 16 + "px";
    flag.style.zIndex = 9999;
    flag.style.pointerEvents = "none";
    flag.style.animation = `fall 4s ease-in ${Math.random() * 1000}ms`;
    document.body.appendChild(flag);

    setTimeout(() => {
      flag.remove();
    }, 10000);
  }
});
```

What I did:

- Optimized the website by combining multiple HTML files into a single HTML file.
- Implemented hover-based detail pop-ups — when users hover over parts of the page, extra information appears smoothly. This keeps the design clean yet informative.
- Added a small Easter egg: clicking “South Korea” on the Home section triggers falling Korean flags for a short time.

Version 2.5 (Mobile)

```
/* Mobile Ver */
@media (max-width: 768px) {
  #side-tab {
    display: block;
  }

  .sidebar {
    position: fixed;
    left: -220px;
    top: 0;
    width: 200px;
    height: 100vh;
    background-color: #f8f8f8;
    transition: left 0.3s ease;
    z-index: 1000;

    overflow-y: auto;
    -webkit-overflow-scrolling: touch;
  }

  .sidebar.open {
    left: 0;
  }

  .sidebar.open .close-btn {
    display: block;
  }
}
```

What I did:

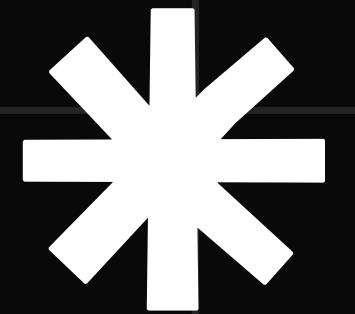

- Fully optimized for mobile:
 - The sidebar now turns into a toggleable popup on small screens.
 - A left-side tab button opens and closes the sidebar easily.
- Overall, this version reflects all the programming skills I have learned so far in this Capstone. I wrote multiple JavaScript scripts for dynamic features and ensured better accessibility for all devices.

Step 3: Publishing to the Public

How I Published:

- After coding in VS Code, I uploaded my files to GitHub.
- I used GitHub Pages for free hosting.
- Since my custom domain (henrykim.ca) was already connected, my site went live automatically.

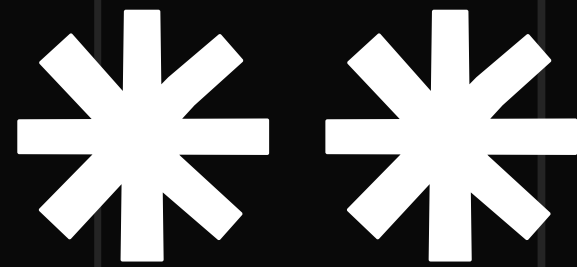

henrykim.ca

(Note: Some school networks block new domains, but it works fine on mobile data or other Wi-Fi)

Debugging & Errors

- Lacked enough debugging skills, so finding and fixing bugs took a lot of time.
- Many unexpected errors happened, requiring extra effort to solve.

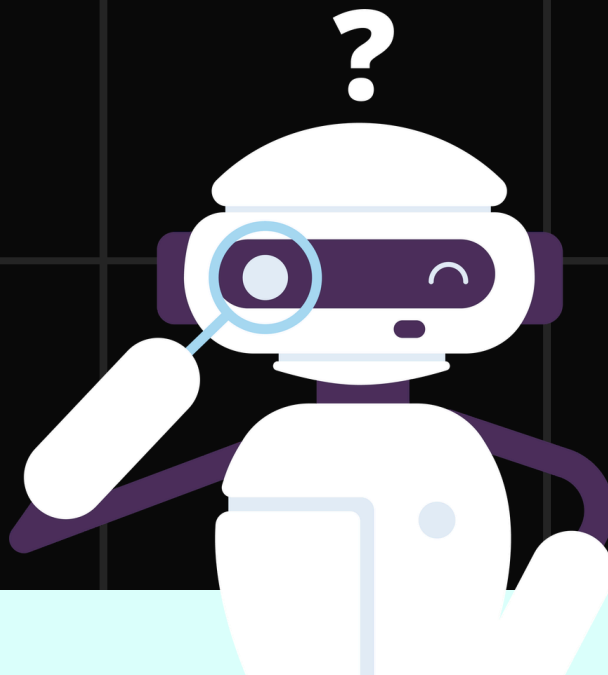

Clean Code

Spent time rewriting, removing unnecessary code, and refactoring to keep it simple and clean.

New Features

Adding new features I hadn't learned yet took extra study time.

Challenges While Building My Website

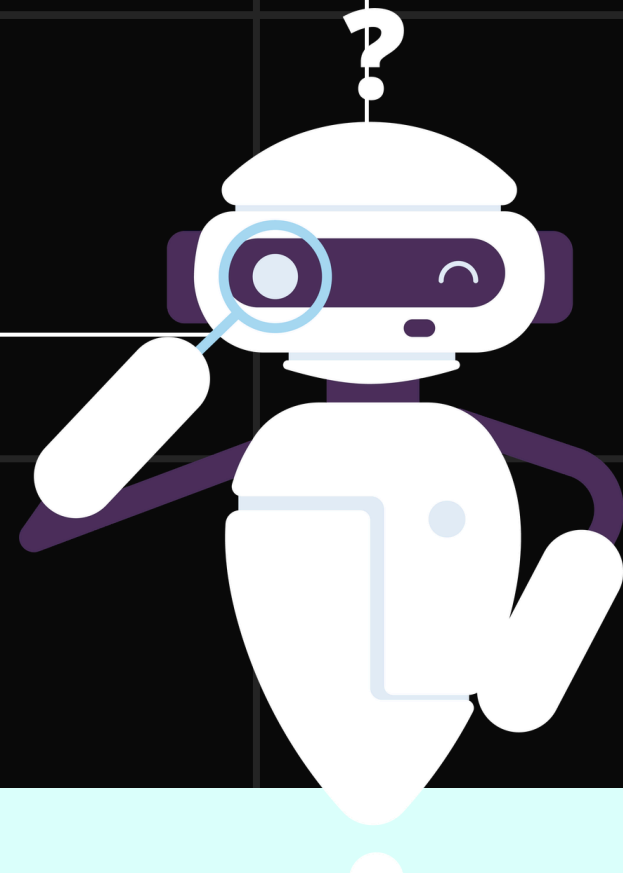

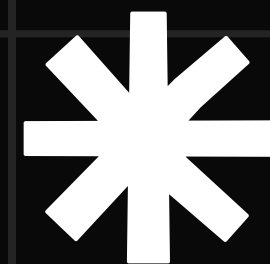

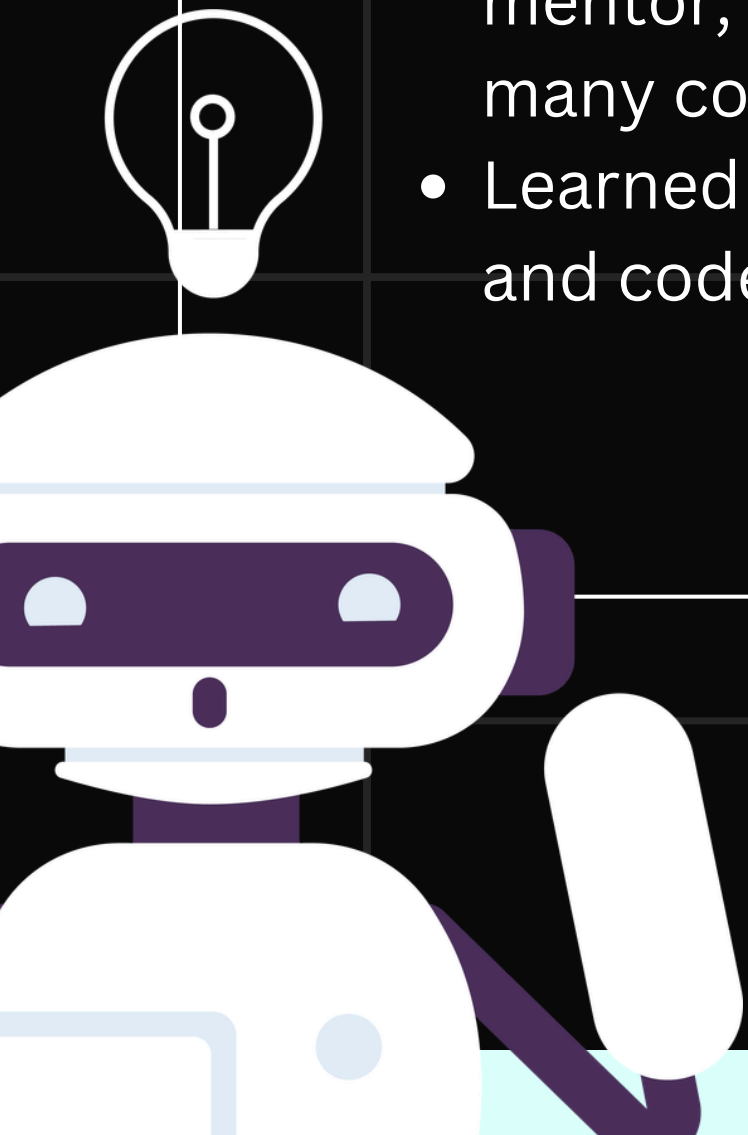

* How I Overcame?

Mentorship & Guidance

- Got valuable advice and feedback from my mentor, In-Woo Park, who helped me solve many coding issues.
- Learned practical tips through discussions and code reviews.

AI Tools & Learning

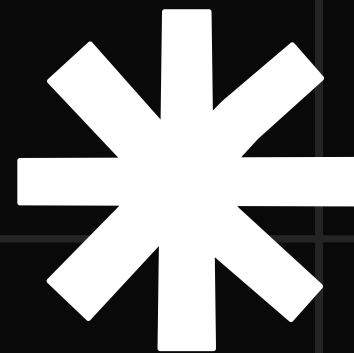

- Used ChatGPT and various AI-based tools and cloud services to get quick answers and coding help.
- Watched coding tutorials and practiced a lot to improve my skills step by step.

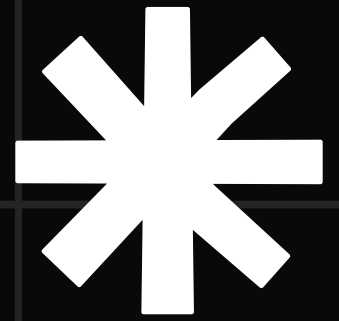

Skills I Developed

What I Learned:

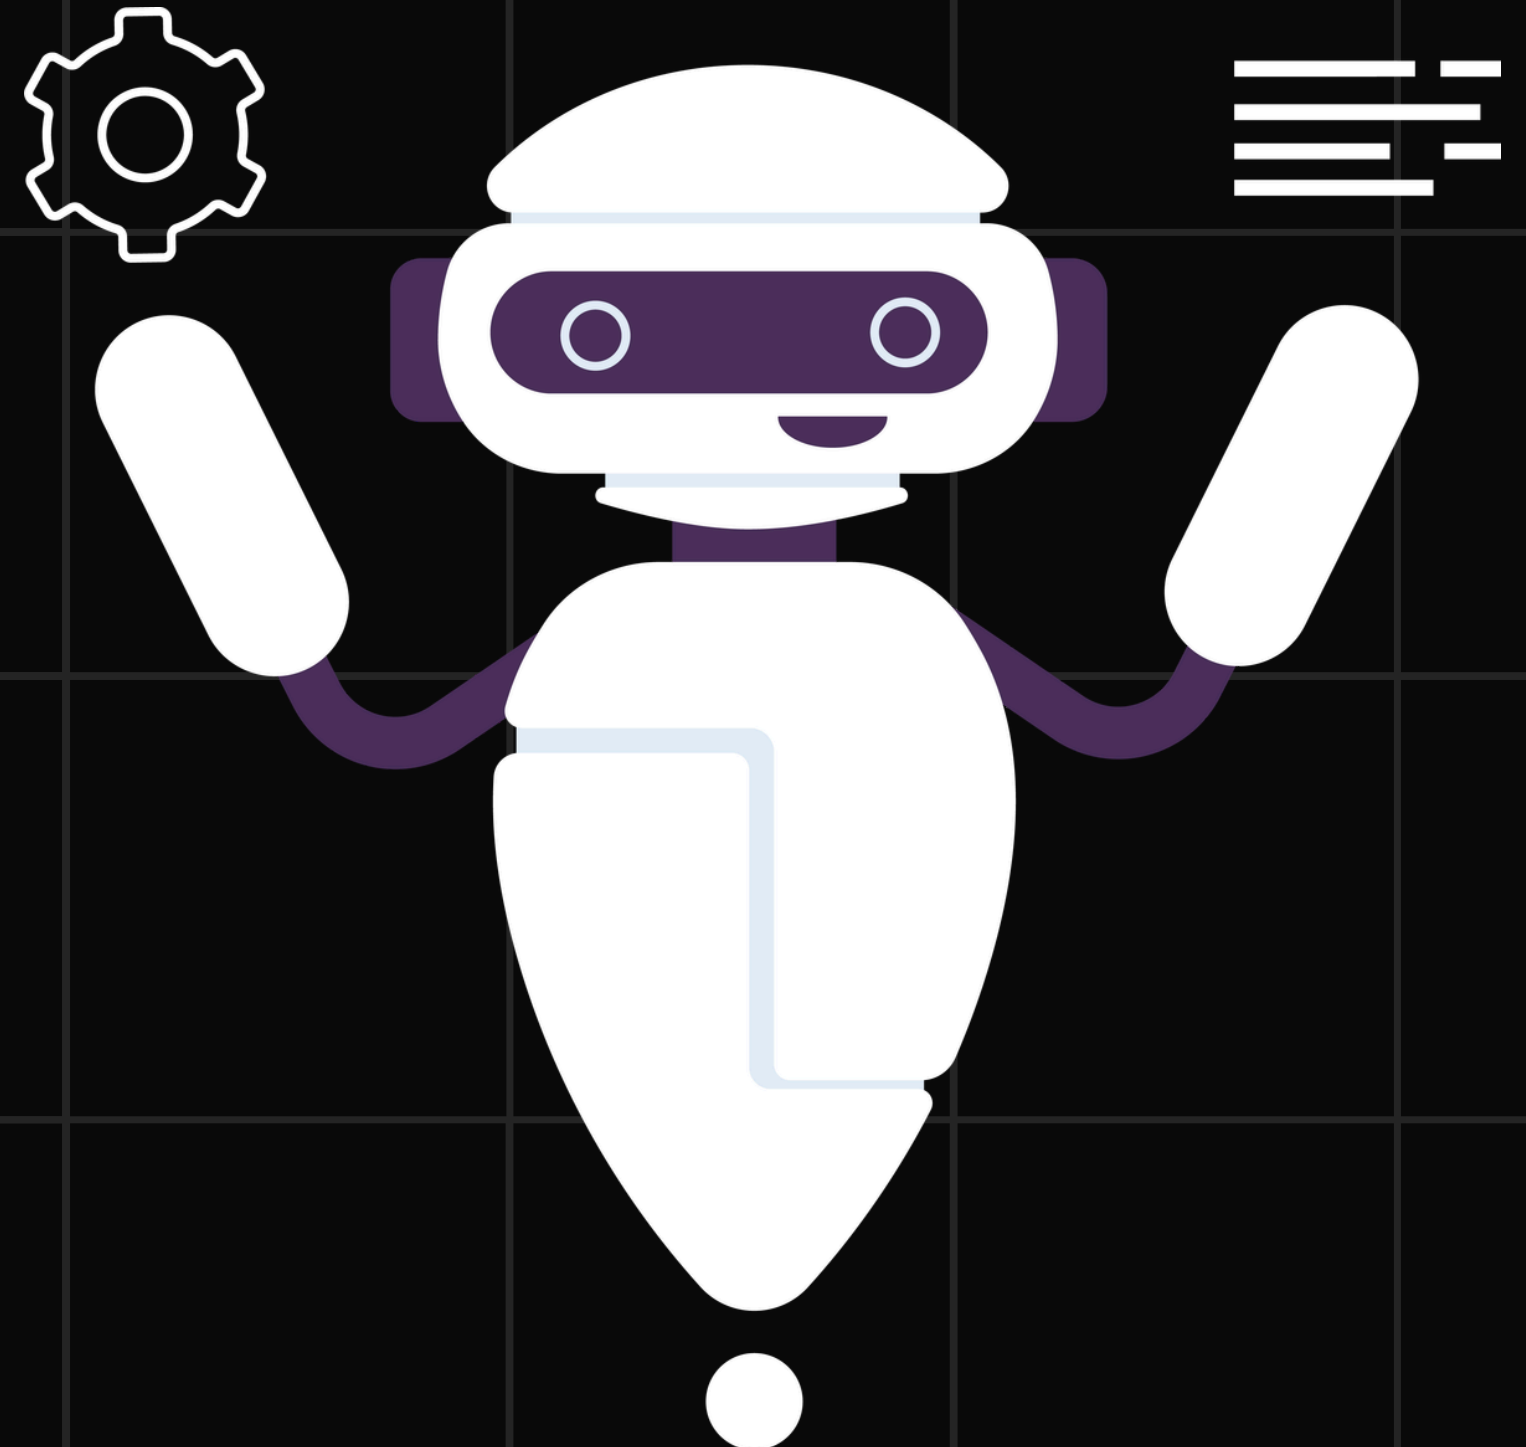

- HTML, CSS, JavaScript
- Debugging
- Code Refactoring
- Interactive Features
- Responsive Design
- GitHub Pages & Domain
- AI Tools & Mentorship
- Advanced Learning Mindset

Greatest Success

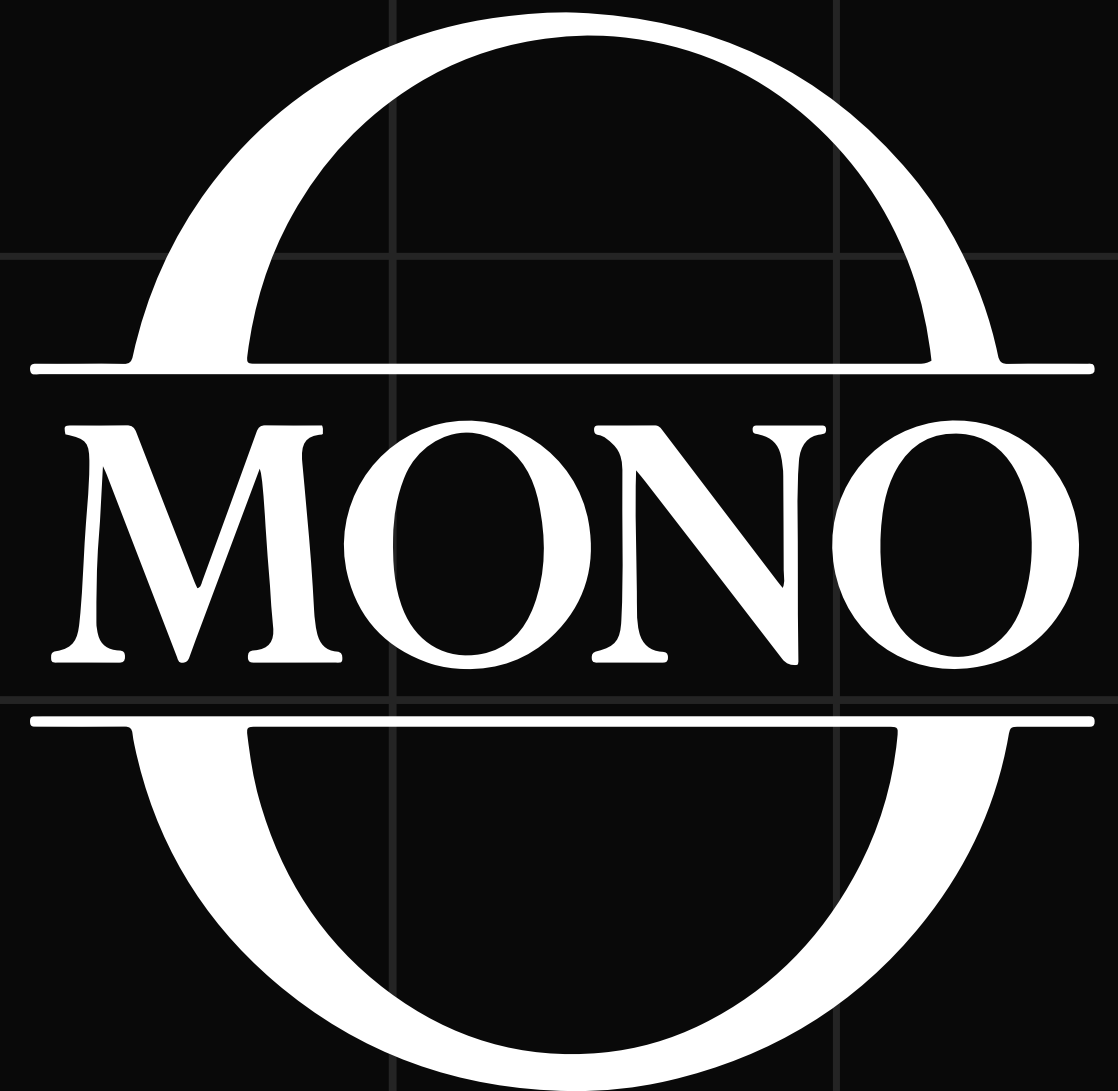

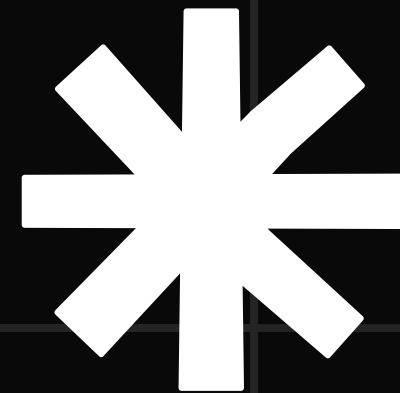

My greatest success was coding and publishing my own website from scratch. This gave me real confidence and skills to build MONO in the future.

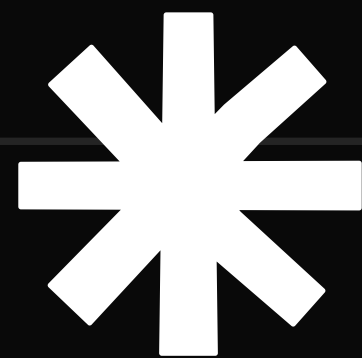

Next Steps for MONO

With my coding skills ready, I'll now build MONO: an AI system for profit scoring, real-time data, and automated reselling.

Conclusion

I built and published my own website from scratch, solved real coding challenges, and gained the confidence and skills to develop MONO for real in the future.

Thankyou

Henry Kim
